PROFESSIONAL SUMMARY

Frontend Engineer with 1+ years of experience developing and maintaining production-grade web applications using React.js and TypeScript. Skilled in building scalable user interfaces, integrating REST APIs, and delivering new features through iterative development cycles. Experienced in performance optimization, real-time data handling, and scalable state management using Redux Toolkit and RTK Query. Collaborate closely with backend engineers, product teams, and QA teams to deliver reliable production systems through phased releases in agile environments.

TECHNICAL SKILLS

Frontend: React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, TailwindCSS, Responsive Design, WebSocket for real-time updates
State Management: Redux Toolkit, RTK Query, Context API
Backend Exposure: Node.js, Express.js, REST APIs
Database: MongoDB
Testing: Vitest, Jest
Build Tools: Vite, Webpack
Tools: Git, GitHub, GitLab, Postman, Chrome DevTools, Lighthouse
Concepts: Accessibility (WCAG), UX Principles, Performance Optimization

PROFESSIONAL EXPERIENCE

DhinaTechnologies Tamil Nadu, India
Frontend Engineer Apr 2025 – Mar 2025

- Developed and maintained scalable web applications using React, TypeScript, and modular frontend architecture.
- Built responsive and accessible user interfaces using HTML, CSS, Flexbox, and Grid layouts.
- Implemented state management using Redux Toolkit and RTK Query for efficient API data fetching and caching.
- Integrated frontend systems with REST APIs for product catalogs, authentication, order processing, and payment workflows.
- Implemented WebSocket-based real-time updates for order tracking and live application data synchronization.
- Integrated Razorpay payment gateway to support secure checkout transactions and payment verification.
- Improved application performance using lazy loading, route-based code splitting, and bundle optimization.
- Collaborated with backend engineers to define API contracts and ensure reliable frontend-backend communication.
- Participated in code reviews, sprint planning, and technical discussions to improve system design and maintainability.
- Worked with CI/CD pipelines and automated build workflows for deployment and release management.

Spangless Infotech Nagercoil, India
Frontend Developer Trainee Jul 2024 – Apr 2025

- Developed a hospital management admin panel web application using React.js and REST API integrations.
- Built user management interfaces including doctor, patient, and staff listing pages with server-side pagination.
- Implemented searchable and sortable data tables for managing large datasets.
- Integrated APIs to manage hospital data including patient records, appointments, and staff workflows.
- Developed reusable UI components for admin dashboards, forms, and data management interfaces.
- Implemented responsive layouts optimized for desktop and tablet devices.
- Added loading states, error handling, and API validation to improve application reliability.
- Collaborated with backend developers to ensure proper API integration and data flow.

PROJECTS

Multi-Vendor eCommerce Admin Dashboard

- Developed CMS-style admin dashboard for managing vendors, shops, products, categories, and orders in a multi-vendor marketplace.
- Implemented role-based authentication and protected routes for secure admin and vendor access control.
- Integrated vendor-based REST APIs for product management, inventory updates, and order processing.
- Built dynamic CRUD interfaces for product creation, category management, and inventory tracking.
- Implemented server-side pagination for product and order management tables to handle large datasets efficiently.
- Implemented RTK Query API layer with caching and automatic re-fetching of updated records.
- Developed CSV bulk upload functionality and automated PDF invoice generation for order transactions.
- Optimized dashboard performance using lazy loading and route-based code splitting.

Customer eCommerce Platform (Dynamic Web Application)

- Developed a scalable React-based eCommerce platform with dynamic product catalog and API-driven UI rendering.
- Implemented advanced product search, filtering, and sorting capabilities to improve product discoverability and user experience.
- Built full shopping cart functionality including item management, quantity updates, and persistent cart state for seamless customer interactions.
- Developed secure checkout workflows and integrated Razorpay payment gateway for reliable online transactions.
- Implemented customer authentication, order history, and account management, enhancing personalization and user retention.
- Optimized performance and SEO using:
  - Lazy loading and component-level code splitting for faster page rendering.
  - Dynamic meta tags, title, and keywords via a custom React SEO hook for better search engine visibility.
  - Optimized API calls and caching strategies for improved Time-to-Interactive (TTI).

EDUCATION

Bachelor of Engineering — Electronics and Communication 2020 – 2024

Bethlehem Institute of Engineering, Anna University
